

Hostel Food Wastage Reduction System

The **Hostel Food Wastage Reduction System** is a smart solution designed to reduce food waste in hostels and college messes. The system analyzes student meal attendance and consumption patterns to predict the required quantity of food for each meal. This helps kitchen staff prepare the right amount of food, minimizing excess production and reducing wastage.

Key Features

- Food demand prediction
- Student meal registration
- Waste tracking and reporting
- Real-time dashboard
- Inventory optimization
- Data analytics and visualization

Technologies Used

- Python
- MySQL
- HTML, CSS, JavaScript
- Machine Learning
- Data Analytics

Benefits

- Reduces food wastage
- Lowers operational costs
- Improves food management
- Supports environmental sustainability

This project is ideal for hostels, colleges, cafeterias, and institutions seeking an efficient and data-driven approach to food waste management.
